GVR Pilot -- Call Summary & Next Steps

Government Vacation Rewards | Voxaris x Arrivia

DATE	May 6, 2026
FROM	Ethan Stopperich, Voxaris
TO	Chris Cole, Jay Bankhead, Russell Reese, Stacey Sutherland -- Arrivia
RE	Andie -- AI Fronter Agent, GVR Pilot

Based on our April 30 discovery call. Numbers confirmed by team -- please flag anything off.

QUICK RECAP

Here's what we caught from the April 30 call -- a snapshot of the GVR fronter program as it runs today. Read through, and wherever something's off or missing, just tell us. The rest of this doc is questions and asks so we can fill in the gaps and start building.

NUMBERS WE CAUGHT

Quick reference -- if any of these read wrong, flag it.

Metric	What you told us
Fronter agents	23 total (14 deployed + 9 new hires only ~4 days on phones)
Revenue per fronter / month	\$19,000
Total fronter revenue / month	\$400-\$450k
Hot-lead callback revenue	\$200k/month
Reload (upgrade) revenue	"Couple hundred thousand/month"
Daily dial volume	30,000 dials
Connect rate	~10% (~3,000 connects/day)
Transfers to closer	150-200/day (avg ~180; 177 Thu, 181 Fri last week)
Transfer rate of connects	~6%
Contact cadence	3-4x per year, 5-6 attempts per quarter, ~7 campaigns
Work week	Monday-Friday (Philippines), Saturday volunteer
Best hours	Nights and weekends
Member type	100% free-tier in this campaign
Inbound lift from outbound	~50% of inbound traces back to the outbound footprint
Lead pool for this pilot	Free-membership cold/warm base (NOT hot daily enrollments)

IOS CALL SCREENING

Russell flagged this as the big challenge -- recent iOS updates have cut connect rates by roughly 30 percent. Here's what we heard Arrivia is already doing about it. Russell, fill in anything we missed.

- **HCI routing through LiveVox.** Human clicker confirms each dial -- keeps you inside legal dialing requirements.
- **Local-presence rotation.** Numbers in matching area codes (602, 480, 407, etc.) rotated across the dial pool.

- **Spam-likely scrubbing.** Third-party service scrubs against spam flags and provides a 3-letter brand acronym (name TBD).
- **Branded LCID pilot.** Planned for this month -- ~\$1,000/month for a couple of LCIDs. One variable at a time so the lift is measurable.
- **Crisp noise cancellation.** On the Philippines floor for noise; accent transformation tested without ROI and turned off.

WALK US THROUGH A DAY

We caught the high-level flow on the call. What we're missing is the day-to-day texture. If you can answer any of these in a quick voice memo or a Slack thread, that's plenty -- doesn't need to be formal.

- **Lead pool flow.** When does the daily list drop into LiveVox? Who builds it, who QC's it, and how does it get split across the fronter team?
- **Clicker desk.** How many HCI clickers are running concurrently? What's the click rate per clicker, and how does the dialer hand voice passes to a fronter once a human picks up?
- **A typical fronter shift.** Walk us through the first hour of a fronter's day -- login, queue, first dial, first transfer. What do they actually see on screen and click on?
- **Transfer experience.** When a fronter warm-transfers, what does the closer hear and see? Is there a brief, a screen pop, anything in the CRM that shows up?
- **Disposition + write-back.** After a call wraps, what gets logged automatically vs typed in by the fronter? Where do recordings, transcripts, and dispositions live in LiveVox?
- **Performance review cadence.** How often does Jay's team review fronter calls? What KPIs does each fronter see daily, weekly, monthly?
- **Compliance routine.** Who reviews recordings for disclosure compliance? What happens when something gets flagged?

MATERIALS WE'D LOVE TO GET

These are the things that let us start building Andie on real GVR data instead of guessing. Whatever you can grab is great -- doesn't have to be all at once.

What	Who'd grab it	Quick context
Successful fronter call recordings or transcripts	Jay	Aim for ~1,000 if possible. We model Andie's tone and flow directly on your best fronters. You mentioned you can pull these.
Unsuccessful / declined / wrong-person recordings	Jay	~1,000 if possible. Knowing what didn't work is half the job.
Current best-in-class fronter script	Jay	Whatever the team uses today, including the Balto-era version if it's still around.
Approved recording disclosure language	Arrivia legal	The exact verbatim wording -- we'll bake it into the opener.

What	Who'd grab it	Quick context
Forbidden phrases or claims list	Jay + legal	Anything Andie should never say. Pricing, comparisons, competitor names, MLA-flagged language, etc.
LiveVox sandbox or sample export	Russell	Sandbox is ideal so we don't touch production. If that's a lift, a sample CSV with the field names works as a starting point.
Lead field mapping from LiveVox	Russell	Just the column names in your export -- we'll match them on our side.
Closer transfer endpoint	Jay	SIP, PSTN, or LiveVox internal -- wherever you want Andie to bridge the call.
Voice picked from the test line	Jay + team	Whenever you've got a few minutes, call the test number, listen, tell us which voice feels right.

THINGS WORTH FLAGGING

A few items came up on the call that aren't blockers but are worth keeping on the radar. Yell if any of these need a real conversation before pilot.

- **Off-shore voice perception.** The military/government demographic doesn't always engage with Philippines-accented agents. Crisp is doing what it can; accent transformation didn't pencil out.
- **New-hire ramp.** 9 of 23 frontiers have ~4 days on phones, which drags the \$19k/agent baseline. Real productive headcount is closer to 14.
- **Weekend / nights coverage gap.** Best contact hours are nights and weekends, but Philippines mirrors the U.S. closer schedule. Saturday is volunteer-only.
- **Discovery quality at handoff.** Jay said it best -- the more the closer knows before they pick up, the more it converts. Cold transfers underperform.

-- Ethan Stopperich, Voxaris
